***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Porowski et al.

Rejection is maintained same as in paper no. 6, mailed on 8/1/01.

Applicant's arguments filed on 11/27/01 have been fully considered but they are not persuasive. Applicant amend the claims by adding vapor phase deposition. However, there is no patentable weight given to preamble language of "vapor phase deposition". Moreover, applied reference by Porowski et al discloses evaporation of the metal solution into vapor phase to deposit the first and second compound semiconductor layers of GaN (see col. 8, lines 26-40).

Applicant argues that plural steps of respectively growing plural nitride semiconductor layers on a substrate. However, Porowski et al also discloses in addition to growing first and second semiconductor layers, growing plural semiconductor layers by vapor phase techniques such as MBE or MOCVD (see col. 3, lines 61-65).

Applicant further mention that Porowski teaches a method of growing crystal by melting metals composing a group III element (Ga,Al,In) in crucible, and in nitrogen ambient when a state of equilibrium exists between vapor and solid. However, such explanation is irrelevant because the claimed limitations with claimed conditions such as pressure and temperature to grow first and second layers are met by disclosed subject matter of Porowski.
